DETAILED ACTION

Response to Amendment

1. The preliminary amendment filed on March 29, 2006 has been entered.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

3. The drawings filed on March 29, 2006 are objected to for the following reason. Figure 1 must apparently be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

4. The abstract of the disclosure is objected to because the legal term “comprising” must apparently be changed to --including--. Correction is required. See MPEP § 608.01(b).

5. The specification is objected to because the phrase --filed on September 30, 2003,-- must apparently be inserted immediately after the serial number of the British application cited on the third line of the paragraph under the heading “CROSS-REFERENCES TO RELATED APPLICATIONS” on the first page of the specification. Appropriate correction is required.

Allowable Subject Matter

6. Claims 1-10 are allowed.

7. As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

8. The following is a statement of reasons for the indication of allowable subject matter: The prior art fails to teach or fairly suggest the recited carburetor with the recited rich flow passage, lean flow passage, planar partition, fuel jet, partition aperture, pivotable butterfly valve, and semi-annular seating ledges in the recited positioning and operative relationship to create the recited pressure differential so that the pressure in the lean flow passage is higher than the pressure in the rich flow passage.

Conclusion

9. The prior art made of record is considered pertinent to applicant's disclosure. These references have been cited as art of interest to show other carburetors with flow ducts having rich and lean flow passages.

10. This application is in condition for allowance except for the following formal matters:

The drawings, abstract, and specification must be corrected as explained respectively above in paragraphs 3-5.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 25 USPQ 74, 453 O.G. 213, (Comm'r Pat. 1935).

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
